

NING LI, PH.D.

Assistant Researcher, Department of Medicine/Division of Nanomedicine · University of California, Los Angeles

Dr. Li works on using animal models to study how pro-oxidative ambient particles interfere with immune response to common allergens. She started her work at UCLA in Dr. Nel's laboratory, focusing on identifying the mechanisms by which particulate pollutants exert their biological effects, with an emphasis on oxidative stress.

She earned her Ph.D. in Pathology and Laboratory Medicine from the University of Wisconsin-Madison.
