Re: Notice of Preliminary Decision – Emission Reduction Credits  
Facility Number: C-911  
Project Number: C-1122266

Dear Mr. Wandzell:

Enclosed for your review and comment is the District's analysis of Panoche Ginning Company's application for Emission Reduction Credits (ERCs) resulting from the shutdown of a cotton gin, at 43890 W. North Avenue in Firebaugh. The quantity of ERCs proposed for banking is 480 metric tons CO2e/yr.

The notice of preliminary decision for this project will be published approximately three days from the date of this letter. After addressing all comments made during the 30-day public notice comment period, the District intends to issue the ERCs. Please submit your written comments on this project within the 30-day public comment period, as specified in the enclosed public notice.

Thank you for your cooperation in this matter. If you have any questions regarding this matter, please contact Mr. Steve Roeder of Permit Services at (661) 392-5615.

Sincerely,

[Signature]

Amaud Marjollet  
Director of Permit Services

ERC Application Review - Greenhouse Gases
Cotton Gin Shutdown

Facility Name: Panoche Ginning Company
Date: 7/8/15

Mailing Address: 43890 W. North Avenue
Firebaugh, CA 93622

Contact Person: Ed Wandzell
Telephone: (559) 659-1427
Project #: C-1122266
Received: 7/16/12

Deemed Complete: April 1, 2013
ERC #: C-1365-24

I. Summary

The primary business of this facility is cotton ginning. Panoche Ginning Company has surrendered the Permit to Operate (PTO) for their cotton gin (C-911-1-5) following the permanent shutdown after the 2007 ginning season. The facility had submitted an application to bank the emission reduction credits (ERCs) for the actual emission reductions (AER) of the criteria pollutants on 12/3/07 (ERC Project C-1074221).

Subsequently, the facility has submitted this application to bank the Greenhouse Gas (GHG) AER that also resulted for the shutdown of their gin. See the surrendered (PTO) in Appendix A.

Selection of Geographical Boundary for Determining Permanence of the GHG Emission Reduction

Rule 2301 contains several eligibility criteria for emission reduction credit banking, including that the emission reduction must be permanent. When determining the geographical boundary in which the emission reduction is determined to be permanent, the applicant may consider how the GHG ERC may likely be used.

Please note that while Rule 2301 allows facilities to receive ERCs for GHG emission reductions, the District does not have any requirements on the use of GHG ERCs. However, it is anticipated that the likely uses of such GHG ERCs would be their future retirement as GHG mitigation in the California Environmental Quality Act (CEQA) process.

Pursuant to CEQA, lead agencies must consider the environmental impact of GHG emissions from a project and may require that such GHG emissions be mitigated. In evaluating various mitigation techniques, including the retirement of GHG ERCs, the lead agency must determine if the proposed mitigation technique adequately mitigates the projects GHG emission increase.
When a lead agency determines if the retirement of a particular GHG ERC provides adequate GHG mitigation for a project, the lead agency may choose to consider the location where the GHG ERC was generated and the geographical boundary used to determine the permanence of the emission reduction. In making this determination, the lead agency may conclude that the retirement of a particular GHG ERC would provide adequate mitigation for projects within that same geographical boundary. Again, that determination will be made be the lead agency for any particular project.

For this application, the facility has selected California as the geographical boundary for which the emission reduction is permanent. Information has been provided to validate this geographical boundary selection. Using this geographical boundary, it was determined that the GHG emission reduction is permanent within California.

The following AER qualify for ERC banking.

II. Applicable Rules

Rule 2301  Emission Reduction Credit Banking (1/19/12)

III. Location of Reduction

The equipment was located at 43890 W. North Avenue in Firebaugh.

IV. Method of Generating Reductions

The emission reductions were generated by the shutdown of a permitted cotton ginning operation. The GHG were emitted from the cotton drying equipment which was fired on natural gas.

Equipment Description

C-911-1-5: COTTON GIN WITH MODULE FEEDER, 10 SEED-SIDE CLEANERS, THREE SAW GIN STANDS, SIX LINT CLEANERS WITH ONE 6 MMBTU/HR, TWO 3 MMBTU/HR, AND ONE 2 MMBTU/HR DRYERS, OVERFLOW SYSTEM, MOTE SYSTEM, BATTERY CONDENSER, AND TRASH SYSTEM
V. Calculations

A. Assumptions and Emission Factors

Assumptions

- Units of GHG AER is metric tons of CO$_2$e per year, rounded to the nearest metric ton
- 1,000 kg = 1 metric ton
- 1 therm of Natural Gas = 100 scf
- The final CO$_2$e emission factor from the combustion of natural gas includes GHG emissions of CO$_2$, CH$_4$ and N$_2$O, where the total emission factor includes the summation of each of the compounds multiplied by their Global Warming Potential (GWP)
- The emission factors are from the District's Spreadsheet: ARB GHG Emission Factors

Emission Factors (EF)

The emission factors, global warming potential, and CO$_2$ equivalent emission factors for CO$_2$, CH$_4$, and N$_2$O are shown in the following table.

<table>
<thead>
<tr>
<th>Pollutant</th>
<th>kg/MMBtu</th>
<th>0.1 MMBtu/therm</th>
<th>GWP</th>
<th>CO$_2$e EF</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO$_2$</td>
<td>52.87</td>
<td>0.1</td>
<td>1.00</td>
<td>5.287 kg-CO$_2$e /therm</td>
</tr>
<tr>
<td>CH$_4$</td>
<td>0.0009</td>
<td>0.1</td>
<td>21.00</td>
<td>0.0019 kg-CO$_2$e /therm</td>
</tr>
<tr>
<td>N$_2$O</td>
<td>0.0001</td>
<td>0.1</td>
<td>310.0</td>
<td>0.0031 kg-CO$_2$e /therm</td>
</tr>
<tr>
<td>CO$_2$e</td>
<td></td>
<td>0.1</td>
<td></td>
<td>5.292 kg-CO$_2$e /therm</td>
</tr>
</tbody>
</table>

The CO$_2$e emission factor is converted into metric tons/therm as follows:

$$\frac{5.292 \text{ kg} \cdot \text{CO}_2e}{\text{therm}} \times \frac{1 \text{ metric ton}}{1,000 \text{ kg}} = 0.00529 \frac{\text{metric tons} \cdot \text{CO}_2e}{\text{therm}}$$

B. Baseline Period Determination

Pursuant to Rule 2301, Section 3.6, the Baseline Period is the same as defined in Rule 2201, which is:

> The two consecutive years of operation immediately prior to the submission date of the complete application; or at least two consecutive years within the five years immediately prior to the submission date of the complete application if determined by the APCO as more representative of normal source operation.

The original ERC Banking Project C-1074221 specified the baseline period as the operating years 2005 - 2006. Since the District has already established this as the correct baseline period for the criteria pollutant emission reductions that have already been evaluated and issued, the same baseline period is used for this evaluation.

Therefore the Baseline Period is the operating years of 2005 and 2006.
C. Baseline Data

The baseline natural gas-use is taken from the annual fuel-use records that have been supplied by the applicant, as evaluated in ERC project S-1074221, and is posted in the following table.

<table>
<thead>
<tr>
<th>Year</th>
<th>Annual Fuel Use (Therms)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>
<td>89,324</td>
</tr>
<tr>
<td>2006</td>
<td>91,956</td>
</tr>
</tbody>
</table>

D. Historical Actual Emissions (HAE)

The HAE from the fuel use is determined by multiplying the annual fuel-use by the emission factor presented above.

<table>
<thead>
<tr>
<th>Year</th>
<th>CO\textsubscript{2}e HAE</th>
</tr>
</thead>
<tbody>
<tr>
<td>2005</td>
<td>0.00529 metric tons/therm x 89,324 therms/yr = 473 metric tons/yr</td>
</tr>
<tr>
<td>2006</td>
<td>0.00529 metric tons/therm x 91,956 therms/yr = 486 metric tons/yr</td>
</tr>
</tbody>
</table>

Average 480 metric tons/yr

E. Post Project Potential to Emit (PE2)

As discussed above, the subject equipment has been permanently shut down and its PTO was surrendered. Therefore the PE2 is 0.

F. Emission Reductions Eligible for Banking

The emission reductions eligible for banking are the difference between the historical actual emissions and the potential to emit after the project.

ERCs eligible for banking = 480 metric ton/year − 0 ton/year = 480 metric ton/year

VI. Compliance

Rule 2301 – Emission Reduction Credit Banking

Regarding GHG, the purpose of this Rule is to:

1.2.1 Provide an administrative mechanism for sources to bank voluntary greenhouse gas emission reductions for later use.
1.2.2 Provide an administrative mechanism for sources to transfer banked greenhouse gas emission reductions to others for any use.
1.2.3 Define eligibility standards, quantitative procedures and administrative practices to ensure that banked greenhouse gas emission reductions are real, permanent, quantifiable, surplus, and enforceable.
Section 4.5 specifies eligibility criteria for GHG emission reductions to qualify for banking. Below is a summary of each criteria and a description of how the emission reductions satisfy the criteria.

Section 4.5.1 requires that the emission reduction must have occurred after 1/1/05.

The emission reductions occurred when the PTO was surrendered on 1/1/06. As the emission reduction occurred after 1/1/05, this criteria has been satisfied.

Section 4.5.2 requires that the emissions must have occurred in the District.

The emissions occurred at 43890 W. North Avenue in Firebaugh, CA. Since this location is within the District, this criteria has been satisfied.

Section 4.5.3 requires that the emission reductions must be real, surplus, permanent, quantifiable, and enforceable.

Real:

The GHG emission reductions were generated by the shutdown of a cotton gin. The real emissions were calculated from actual historic fuel-use data and recognized emission factors. The cotton gin has been removed. Therefore, the emission reductions are real.

Surplus:

The facility is not subject to the CARB cap and trade regulation, and the emission reductions occurred prior to 1/1/12. Therefore, the emission reductions satisfy the surplus requirement in Section 4.5.3.1.

There are no laws, rules, regulations, agreements, orders, or permits requiring any GHG emission reductions from cotton gins. Therefore, the emission reductions satisfy the surplus requirement in Section 4.5.3.2.

The emission reductions are not the result of an action taken by the permittee to comply with any requirement. The emission reductions are surplus and additional of all requirements. Therefore, the emission reductions satisfy the surplus requirement in section 4.5.3.4.

The Certificates will be identified according to Section 6.15.3 below.

Permanent:

The cotton gin has been shut down, removed, and the PTO has been surrendered.
When determining the geographical boundary in which the emission reduction is determined to be permanent the applicant may consider how the GHG ERC may likely be used.

Please note that while Rule 2301 allows facilities to receive ERCs for GHG emission reductions, the District does not have any requirements on the use of GHG ERCs. However, it is anticipated that the likely uses of such GHG ERCs would be their future retirement as GHG mitigation in the CEQA process.

Pursuant to CEQA, lead agencies must consider the environmental impact of GHG emissions from a project and may require that such GHG emissions be mitigated. In evaluating various mitigation techniques, including the retirement of GHG ERCs, the lead agency must determine if the proposed mitigation technique adequately mitigates the projects GHG emission increase.

When a lead agency determines if the retirement of a particular GHG ERC provides adequate GHG mitigation for a project, the lead agency may choose to consider the location where the GHG ERC was generated and the geographical boundary used to determine the permanence of the emission reduction. The in making this determination, the lead agency may conclude that the retirement of a particular GHG ERC would provide adequate mitigation for projects within that same geographical boundary. Again, that determination will be made be the lead agency for a particular project.

This facility has selected California as the geographical boundary for which the emission reduction is permanent. Information has been provided below to validate this geographical boundary selection.

As shown in the following chart, the total cotton acreage has been on a decline since January of 2005. Acreage has declined from 667,000 acres in 2005 down to 190,065 acres in 2009. The decline in acreage forced the closure of several cotton gins in California.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Because there has been a decrease in the amount of cotton being grown in the state of California, the need to gin cotton in California has decreased accordingly.

Based on this information, the geographical boundary for which the emission reduction is permanent within California.

The ERC will include the following identifier:

"Shutdown of cotton gin verified as permanent within the State of California"

Quantifiable:

The actual emissions were calculated from historic fuel-use records and accepted emission factors. Therefore, the emission reductions are quantifiable and have been quantified.

Enforceable:

The cotton gin has been shut down and the PTO has been surrendered to the District. Operation of the equipment without a valid permit would subject the permittee to enforcement action. Therefore, the emission reductions are enforceable.

Section 4.5.4 requires that GHG emission reductions be calculated as the difference between the historic annual average GHG emissions (as CO$_2$e) and the PE2 after the reduction is complete. The historical GHG emissions must be calculated using the consecutive 24 month period immediately prior to the date the emission reductions occurred (the shutdown of the cotton gin), or another consecutive 24 month period in the 60 months prior to the date the emission reduction occurred if determined by the APCO as being more representative of normal operations.

The GHG emission reductions were calculated according to the baseline period identified above. Since this is a permanent shutdown of the cotton gin, with none of the load being shifted to any other gin in California, there is no post-project potential to emit GHG.

Section 4.5.5.5 requires that GHG emission reductions proposed to be quantified using CARB-approved emission reduction project protocols shall be calculated in accordance with the applicable protocol.

Since the GHG emission reductions are not subject to an applicable CARB-approved emission reduction project protocol, this section is not applicable.
Section 4.5.6 requires that ERCs shall be made enforceable through permit conditions or legally binding contract.

The cotton gin held a legal District operating permit. That permit has been surrendered to the District. Since the operation of the cotton gin would require a new Authority to Construct, as discussed above the emission reduction is enforceable.

Section 5 identifies ERC Certificate application procedures.

Section 5.5.2 requires, for emission reductions occurring prior to 1/19/12, applications for ERCs must be submitted by 7/19/12.

The ERC application was submitted on 7/19/12, therefore the application is timely.

Section 6.15 specifies the registration requirements for GHG ERCs.

This emission reductions are surplus and additional of all requirements pursuant to Section 4.5.3.4. Therefore the ERC certificate shall include the following notation:

“This emission reduction is surplus and additional to all applicable regulatory requirements.”

Compliance with Rule 2301 has been demonstrated and no adjustments are required under this Rule.

VII. Recommendation

Issue the ERC Certificate in the amount posted in the table below and on the Draft ERC Certificate in Appendix B.

Permit to Operate

FACILITY: C-911
LEGAL OWNER OR OPERATOR: PANOCHE GINNING CO
MAILING ADDRESS:
43890 W NORTH AVE
FIREBAUGH, CA 93622
FACILITY LOCATION:
43890 W NORTH AVE
FIREBAUGH, CA 93622
FACILITY DESCRIPTION:
COTTON GINNING

EXPIRATION DATE: 09/30/2012

The Facility’s Permit to Operate may include Facility-wide Requirements as well as requirements that apply to specific permit units.

This Permit to Operate remains valid through the permit expiration date listed above, subject to payment of annual permit fees and compliance with permit conditions and all applicable local, state, and federal regulations. This permit is valid only at the location specified above, and becomes void upon any transfer of ownership or location. Any modification of the equipment or operation, as defined in District Rule 2201, will require prior District approval. This permit shall be posted as prescribed in District Rule 2010.

Executive Director / APCO

David Warner
Director of Permit Services
PERMIT UNIT REQUIREMENTS

1. No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
2. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
3. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
4. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 2201]
5. Material removed from dust collector(s) shall be disposed of in a manner preventing entrainment into the atmosphere. [District Rule 2201]
6. Daily ginning rate of the cotton gin shall not exceed 180 tons of baled cotton per day (720 bales per day, based on 500-pound bales). [District Rule 2201]
7. Annual ginning rate of the cotton gin shall not exceed 30,804 tons of baled cotton per year (123,214 bales per year, based on 500-pound bales). [District Rule 2201]
8. Total PM10 emissions from the cotton gin operation shall not exceed 3.44 pounds per ton of baled cotton (0.86 pounds per bale, corrected to 500-pound bales). [District Rule 2201]
9. Emissions of PM10 from the thirty nine (39) cyclones in the plenum system serving the unloading, #1 moist air, #2 moist air, overflow, lint cleaner, motes condensers, and battery condenser systems shall not exceed 2.44 lb PM10 per ton of baled cotton (0.61 pounds per bale, based on 500-pound bales) [District Rule 2201]
10. Emissions of PM10 from the cyclone system serving the mote trash system shall not exceed 0.08 lb PM10 per ton of baled cotton (0.02 pounds per bale, based on 500-pound bales) [District Rule 2201]
11. Emissions of PM10 from the cyclone system serving the stockpiler system shall not exceed 0.12 lb PM10 per ton of baled cotton (0.03 pounds per bale, based on 500-pound bales) [District Rule 2201]
12. Emissions of PM10 from the cyclone system serving the pit dust system shall not exceed 0.20 lb PM10 per ton of baled cotton (0.05 pounds per bale, based on 500-pound bales) [District Rule 2201]
13. Emissions of PM10 from the cyclone system serving the motes system shall not exceed 0.48 lb PM10 per ton of baled cotton (0.12 pounds per bale, based on 500-pound bales) [District Rule 2201]
14. Emissions of PM10 from the cyclone system serving the motes transfer system shall not exceed 0.12 lb PM10 per ton of baled cotton (0.03 pounds per bale, based on 500-pound bales) [District Rule 2201]
15. When firing on natural gas, emission from dryer burner #1, #2 or #3 shall not exceed any of the following limits: 0.1 lb-NOx/MMBtu; 0.02 lb-CO/MMBtu; 0.0076 lb-PM10/MMBtu; 0.003 lb-SOx/MMBtu or 0.006 lb-VOC/MMBtu. [District Rule 2201]
Permit Unit Requirements for C-911-1-5 (continued)

16. When firing on propane, emission from dryer burner #1, #2 or #3 shall not exceed any of the following limits: 0.1 lb-NOx/MMBtu; 0.02 lb-CO/MMBtu; 0.01 lb-PM10/MMBtu; 0.008 lb-SOx/MMBtu or 0.005 lb-VOC/MMBtu. [District Rule 2201]

17. The unloading, #1 moist air, #2 moist air, overflow, lint cleaner, motes condensers, and battery condenser systems shall be served by (39) (34)-inch 1D-3D cyclone collectors, operating at a cyclone inlet air velocity of 3200 ± 400 ft/min. [District Rule 2201]

18. The mote trash system shall be served by (1) (28)-inch 1D-3D cyclone collectors, operating at a cyclone inlet air velocity of 3200 ± 400 ft/min. [District Rule 2201]

19. The stockpiler system shall be served by (1) (28)-inch 1D-3D cyclone collectors, operating at a cyclone inlet air velocity of 3200 ± 400 ft/min. [District Rule 2201]

20. The pit dust system shall be served by (1) (46)-inch 1D-3D cyclone collectors, operating at a cyclone inlet air velocity of 3200 ± 400 ft/min. [District Rule 2201]

21. The motes system shall be served by (1) (72)-inch 1D-3D cyclone collectors, operating at a cyclone inlet air velocity of 3200 ± 400 ft/min. [District Rule 2201]

22. The motes transfer system shall be served by (1) (28)-inch 1D-3D cyclone collectors, operating at a cyclone inlet air velocity of 3200 ± 400 ft/min. [District Rule 2201]

23. The trash load-out system shall consist of an enclosed cylindrical hopper installed under the discharge of the cyclone with a trash dump door located at the bottom of the hopper. The dump door shall remain closed except when the hopper is discharging trash into a trailer. [District Rule 4204]

24. Permittee shall conduct daily visual inspections of the material handling systems for leaks, breaks, or other visible signs of equipment malfunctions. [District Rule 4204]

25. Permittee shall maintain a record of the daily inspections of the material handling systems, including any equipment malfunctions discovered and corrective action taken to repair the malfunction, and any source test results. [District Rule 4204]

26. Daily records of the number and weight of bales produced shall be maintained. [District Rule 1070]

27. All records shall be retained on site for at least five years and made available to the District upon request. [District Rules 1070 and 4204]

These terms and conditions are part of the Facility-wide Permit to Operate.
