Re: Notice of Preliminary Decision - Authority to Construct
Facility Number: S-7045
Project Number: S-1183289

Dear Mr. Cline:

Enclosed for your review and comment is the District's analysis of PROs Inc's application for an Authority to Construct for two flares, at various unspecified locations, SJVAPCD.

The notice of preliminary decision for this project will be published approximately three days from the date of this letter. After addressing all comments made during the 30-day public notice period, the District intends to issue the Authority to Construct. Please submit your written comments on this project within the 30-day public comment period, as specified in the enclosed public notice.

Thank you for your cooperation in this matter. If you have any questions regarding this matter, please contact Mr. Richard Edgehill of Permit Services at (661) 392-5617.

Sincerely,

[Signature]

Arnaud Marjollet

Deemed Complete: August 6, 2018  
Engineer: Richard Edgehill  
Lead Engineer: Richard Karrs

I. Proposal

PROS, Inc. (Pros) has requested Authorities to Construct (ATCs) for two transportable flares for multiple uses including well testing, mitigation of gas kicks during drilling operations, equipment depressurization for maintenance purposes, and pipeline pigging. The flares will be authorized to operate at various unspecified locations, SJVAPCD. Flared gas flow rate will be limited to 3 MMscf/day and 288 MMscf/yr. The flares will not be operated together at the same location.

Please note that District Policy SSP 1915 requires that transportable flares be permitted according to District Policy APR 1020 which states that “an emissions unit with various unspecified locations must be prevented (by permit condition) from becoming part of another separate stationary source.” The following condition from APR 1020 will be placed on each permit to reflect this requirement:

*Unit must not be located and operated at an existing facility or operation such that it becomes part of an existing stationary source as defined by District Rule 2201.* [District Rule 2201]

PROs facility S-7045 includes PTOs S-7045-6-0, ‘-12-0, ‘-14-0, ‘-15-1, ‘-10-0 and ‘-20-0 for transportable well testing operations with flares. Each of these operations is considered as a separate stationary source and therefore two or more S-7045 units may not be operated at the same location simultaneously.

The following condition will be placed on each ATC:

*Flare shall not be operated at any location in conjunction with any other flare or combustion equipment operated by PROs Inc.* [District Rule 2201]
II. Applicable Rules

Rule 2201   New and Modified Stationary Source Review Rule (2/18/16)
Rule 2410   Prevention of Significant Deterioration (6/16/11)
Rule 2520   Federally Mandated Operating Permits (6/21/01)
Rule 4001   New Source Performance Standards (4/14/99)
Rule 4002   National Emissions Standards for Hazardous Air Pollutants (5/20/04)
Rule 4101   Visible Emissions (2/17/05)
Rule 4102   Nuisance (12/17/92)
Rule 4201   Particulate Matter Concentration (12/17/92)
Rule 4311   Flares (6/18/09)
Rule 4801   Sulfur Compounds (12/17/92)
CH&SC 41700 Health Risk Assessment
CH&SC 42301.6 School Notice
Public Resources Code 21000-21177: California Environmental Quality Act (CEQA)
California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 15000-15387: CEQA Guidelines

III. Project Location

The equipment will be authorized to operate at various unspecified locations within the District. However, the equipment is restricted by permit condition not to be located within 1,000 feet of the outer boundary of a K-12 school. Therefore, the public notification requirement of California Health and Safety Code 42301.6 is not applicable to this project.

IV. Process Description

As stated in the proposal section the flares will be used for well testing, mitigation of gas kicks during drilling mud recirculation, equipment depressurization for maintenance purposes, and pipeline pigging.

The flares are equipped with a continuous propane pilot and automatic ignition.

A photograph and diagrams of the flare are included in Attachment I.

V. Equipment Listing

Post Project Equipment Description:

S-7045-21-0: TRANSPORTABLE 125 MMBTU/HR FLARE WITH GAS SCRUBBER AND 3-PHASE SEPARATOR AND OPTIONAL AIR-ASSIST FOR MULTIPLE USES INCLUDING WELL TESTING AND DRILLING OPERATIONS, EQUIPMENT DEPRESSURIZATION, AND PIPELINE PIGGING OPERATED AT VARIOUS UNSPECIFIED LOCATIONS, SJVAPCD

S-7045-22-0: TRANSPORTABLE 125 MMBTU/HR FLARE WITH GAS SCRUBBER AND 3-PHASE SEPARATOR AND OPTIONAL AIR-ASSIST FOR MULTIPLE USES
VI. Emission Control Technology Evaluation

Emissions from the flares include oxides of nitrogen (NOx), carbon monoxide (CO), oxides of sulfur (SOx), volatile organic compounds (VOCs), and particulate emissions less than 10 micron (PM10).

**Air Assist**
Smoking may result from incomplete combustion due to the quantity and distribution of combustion air. Air assist ensures that the flares have enough air and turbulence to completely combust the gases for smokeless operation.

**Propane Pilot and Automatic Ignition System**
The flares will operate with a continuous propane/natural gas pilot and an automatic ignition system.

**Sulfur Emissions**
Sulfur emissions from the flares are expected not to exceed 5.0 gr S/100 scf. Therefore, sulfur scrubbing is not required.

**Visibility and VOC Control**
Flares typically operate at 99% control efficiency for VOC. The well test flares being authorized by this project will be equipped with a shroud to reduce flame visibility, improve thermal destruction efficiency, and to prevent down drafts from extinguishing the flame.

VII. General Calculations

A. Assumptions

- Heating value of flared gas is 1,000 Btu/scf (proposed and APR 1720)
- The flared natural gas will have a H2S content less than 5 gr/100 scf (equivalent to 85 ppmv), measured as sulfur (proposed)
- Fugitive emissions are considered to be negligible compared to combustion VOC emissions from the flare
- Flow rate of propane pilot gas is 1080 scf/day. However, pilot gas combustion emissions are assumed to be negligible when compared to emissions resulting from combustion of produced gas
- The maximum quantity of flared gas is 0.125 MMscf/hr (125 MMBtu/hr), 3 MMscf/day (3,000 MMBtu/day), 288 MMscf/yr (288,000 MMBtu/yr)
- VOC content of flared gas is unknown, assume molecular weight of 20 lb/lbmol, 5% by wt VOCs, 1000 Btu/scf
B. Emission Factors

<table>
<thead>
<tr>
<th>Flare Emission Factors</th>
<th>lb/MMBtu</th>
<th>Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO\textsubscript{x}</td>
<td>0.068</td>
<td>FYI 83 (AP 42 Sec 13.5)</td>
</tr>
<tr>
<td>*SO\textsubscript{x}</td>
<td>0.0143</td>
<td>Mass Balance Equation</td>
</tr>
<tr>
<td>PM\textsubscript{10}</td>
<td>0.008</td>
<td>FYI 83 (AP 42 Sec 13.5), Applicant Proposed</td>
</tr>
<tr>
<td>CO</td>
<td>0.37</td>
<td>FYI 83 (AP 42 Sec 13.5)</td>
</tr>
<tr>
<td>VOC</td>
<td>0.063</td>
<td>FYI 83 (AP 42 Sec 13.5)</td>
</tr>
</tbody>
</table>

\[ \frac{5 \text{ gr} \cdot S}{100 \text{ dscf}} \left( \frac{\text{dscf}}{1,000 \text{ Btu}} \right) \left( \frac{10^6 \text{ Btu}}{\text{MMBtu}} \right) \left( \frac{1 \text{ lb}}{7,000 \text{ gr}} \right) \left( \frac{64 \text{ lb} \cdot \text{SO}_2}{32 \text{ lb} \cdot \text{S}} \right) = 0.0143 \frac{\text{lb} \cdot \text{SO}_2}{\text{MMBtu}} \]

EF flare (lb/MMBtu) = 1.2 (200)(Wt % VOCs)(density gas)/hhv

where:

1.2 is a 20% buffer to account for variability on flared gas VOC content (higher buffers can be approved on a case by case basis)
Density gas is the flared gas density in lb/ft\textsuperscript{3}
Wt% VOC is the percentage by weight of VOCs in the gas to be flared
hhv is the higher heating value of the flared gas (Btu/ft\textsuperscript{3})

Assuming a flared gas with 5% by wt VOCs, MW_{\text{avg}} = 20 (slightly heavier than methane), and hhv = 1000 Btu/ft\textsuperscript{3},

Density gas = 20 lb/lbmol/379.5 ft\textsuperscript{3}/lbmol

EF\text{ flare} = 1.2 (200) (5)(20/379.5)/1000

\[ = 0.063 \text{ lb/MMBtu} \]

C. Calculations

1. Pre-Project Potential to Emit (PE1)

The proposed flares are new and therefore PE1 = 0.
2. Post Project Potential to Emit (PE2)

</tr>
</tbody>
</table>

The emissions profile is included in Attachment II.

3. Pre-Project Stationary Source Potential to Emit (SSPE1)

Pursuant to Section 4.9 of District Rule 2201, the Pre-Project Stationary Source Potential to Emit (SSPE1) is the Potential to Emit (PE) from all units with valid Authorities to Construct (ATC) or Permits to Operate (PTO) at the Stationary Source and the quantity of emission reduction credits (ERC) which have been banked since September 19, 1991 for Actual Emissions Reductions that have occurred at the source, and which have not been used on-site.

Since the flares are new and considered there own stationary source, SSPE1 is zero.
4. Post Project Stationary Source Potential to Emit (SSPE2)

Pursuant to Section 4.10 of District Rule 2201, the Post Project Stationary Source Potential to Emit (SSPE2) is the Potential to Emit (PE) from all units with valid Authorities to Construct (ATC) or Permits to Operate (PTO) at the Stationary Source and the quantity of emission reduction credits (ERC) which have been banked since September 19, 1991 for Actual Emissions Reductions that have occurred at the source, and which have not been used on-site. Since each flare is considered its own stationary source, the SSPE2 will be calculated for each unit.

5. Major Source Determination

Rule 2201 Major Source Determination:

Pursuant to District Rule 2201, a Major Source is a stationary source with a SSPE2 equal to or exceeding one or more of the following threshold values. For the purposes of determining major source status the following shall not be included:

- any ERCs associated with the stationary source
- Emissions from non-road IC engines (i.e. IC engines at a particular site at the facility for less than 12 months)
- Fugitive emissions, except for the specific source categories specified in 40 CFR 51.165

S-7045-21-0 and '22-0 (each)

<table>
<thead>
<tr>
<th>Rule 2201 Major Source Determination (lb/year)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO\textsubscript{X}</td>
</tr>
<tr>
<td>---------------------</td>
</tr>
<tr>
<td>SSPE1</td>
</tr>
<tr>
<td>SSPE2</td>
</tr>
<tr>
<td>Major Source Threshold</td>
</tr>
<tr>
<td>Major Source?</td>
</tr>
</tbody>
</table>

Note: PM2.5 assumed to be equal to PM10

As seen in the table above, neither well test flare is an existing Major Source and is not becoming a Major Source as a result of this project.

**Rule 2410 Major Source Determination:**

The facility or the equipment evaluated under this project is not listed as one of the categories specified in 40 CFR 52.21 (b)(1)(iii). Therefore the PSD Major Source threshold is 250 tpy for any regulated NSR pollutant.

<table>
<thead>
<tr>
<th>PSD Major Source Determination (tons/year)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO\textsubscript{2}</td>
</tr>
<tr>
<td>---------------------</td>
</tr>
<tr>
<td>Estimated Facility PE before Project Increase</td>
</tr>
<tr>
<td>PSD Major Source Thresholds</td>
</tr>
<tr>
<td>PSD Major Source? (Y/N)</td>
</tr>
</tbody>
</table>

As shown above, the facility is not an existing PSD major source for any regulated NSR pollutant expected to be emitted at this facility.

6. **Baseline Emissions (BE)**

The BE calculation (in lb/year) is performed pollutant-by-pollutant for each unit within the project to calculate the QNEC, and if applicable, to determine the amount of offsets required.
Pursuant to District Rule 2201, BE = PE1 for:
- Any unit located at a non-Major Source,
- Any Highly-Utilized Emissions Unit, located at a Major Source,
- Any Fully-Offset Emissions Unit, located at a Major Source, or
- Any Clean Emissions Unit, located at a Major Source.

otherwise,

BE = Historic Actual Emissions (HAE), calculated pursuant to District Rule 2201.

As shown in Section VII.C.5 above, the facility is not a Major Source for any criteria pollutant.

Therefore, Baseline Emissions (BE) are equal to the Pre-Project Potential to Emit (PE1).

Since the units are new emissions units, BE = PE1 = 0 for all criteria pollutants.

7. **SB 288 Major Modification**

SB 288 Major Modification is defined in 40 CFR Part 51.165 as "any physical change in or change in the method of operation of a major stationary source that would result in a significant net emissions increase of any pollutant subject to regulation under the Act."

Since this facility is not a major source for any of the pollutants addressed in this project, this project does not constitute an SB 288 major modification.

8. **Federal Major Modification**

District Rule 2201 states that a Federal Major Modification is the same as a "Major Modification" as defined in 40 CFR 51.165 and part D of Title I of the CAA.

Since this facility is not a Major Source for any pollutants, this project does not constitute a Federal Major Modification. Additionally, since the facility is not a major source for PM$_{10}$ (140,000 lb/year), it is not a major source for PM2.5 (200,000 lb/year).

9. **Rule 2410 – Prevention of Significant Deterioration (PSD) Applicability Determination**

Rule 2410 applies to any pollutant regulated under the Clean Air Act, except those for which the District has been classified non attainment. The pollutants which must be addressed in the PSD applicability determination for sources located in the SJV and which are emitted in this project are: (See 52.21 (b) (23) definition of significant)

- NO2 (as a primary pollutant)
- SO2 (as a primary pollutant)
• CO
• PM
• PM10
• Sulfuric acid mist
• Hydrogen sulfide (H2S)
• Total reduced sulfur (including H2S)
• Reduced sulfur compounds

I. Project Emissions Increase - New Major Source Determination

The post-project potentials to emit from all new and modified units are compared to the PSD major source thresholds to determine if the project constitutes a new major source subject to PSD requirements.

The facility or the equipment evaluated under this project is not listed as one of the categories specified in 40 CFR 52.21 (b)(1)(i). The PSD Major Source threshold is 250 tpy for any regulated NSR pollutant.

S-7045-21-0 and '22-0 (each)

<table>
<thead>
<tr>
<th>PSD Major Source Determination: Potential to Emit</th>
<th>NO₂</th>
<th>VOC</th>
<th>SO₂</th>
<th>CO</th>
<th>PM</th>
<th>PM₁₀</th>
</tr>
</thead>

<td>250</td>
</tr>
<tr>
<td>New PSD Major Source?</td>
<td>N</td>
<td>N</td>
<td>N</td>
<td>N</td>
<td>N</td>
<td>N</td>
</tr>
</tbody>
</table>

As shown in the table above, the potential to emit for the project, by itself, does not exceed any PSD major source threshold. Therefore Rule 2410 is not applicable and no further analysis is required.

10. Quarterly Net Emissions Change (QNEC)

The QNEC is calculated solely to establish emissions that are used to complete the District’s PAS emissions profile screen.

\[
\text{QNEC (lb/qtr) = PE2 (lb/qtr) - QBE (lb/qtr)}
\]
<table>
<thead>

VIII. Compliance Determination

Rule 2201 New and Modified Stationary Source Review Rule

A. Best Available Control Technology (BACT)

Rule 1020, Section 3.46 excludes air pollution abatement operations from the definition of "source operation". Since the well test flare is designed to control the VOC emissions from the well, the flare is considered an air pollution abatement operation and is not an emissions unit. Therefore, the well drilling and testing operation may be subject to BACT, but the flare used as a control device is not.

1. BACT Applicability

BACT requirements are triggered on a pollutant-by-pollutant basis and on an emissions unit-by-emissions unit basis for the following*:

a. Any new emissions unit with a potential to emit exceeding two pounds per day,
b. The relocation from one Stationary Source to another of an existing emissions unit with a potential to emit exceeding two pounds per day,
c. Modifications to an existing emissions unit with a valid Permit to Operate resulting in an AIPE exceeding two pounds per day, and/or
d. Any new or modified emissions unit, in a stationary source project, which results in a Major Modification.

*Except for CO emissions from a new or modified emissions unit at a Stationary Source with an SSPE2 of less than 200,000 pounds per year of CO.

a. New emissions units – PE > 2 lb/day

As seen in Section VII.C.2 of this evaluation, the applicant is proposing to install a well drilling and testing operation. The well drilling and testing operation emits only VOC.
The controlled VOC emissions from the well drilling and testing operation are greater than 2 lb/day.

BACT is triggered for VOC since the PE is greater than 2 lb/day. NOx, SOx, PM$_{10}$, and CO emissions are incidental to the control device (i.e. byproducts of combustion in the flare). In accordance with District practice, BACT requirements are not applicable to control devices. Collateral emissions resulting from a control device are therefore not subject to BACT requirements.

b. Relocation of emissions units – PE > 2 lb/day

As discussed in Section I above, there are no emissions units being relocated from one stationary source to another; therefore BACT is not triggered.

c. Modification of emissions units – AIPE > 2 lb/day

As discussed in Section I above, there are no modified emissions units associated with this project; therefore BACT is not triggered.

d. Major Modification

As discussed in Section VII.C.7 above, this project does not constitute a Major Modification; therefore BACT is not triggered.

2. BACT guideline

All BACT guidelines for flares have been rescinded. As such there is no applicable BACT guideline. A project specific BACT analysis must be performed.

3. Top-Down BACT Analysis

Per Permit Services Policies and Procedures for BACT, a Top-Down BACT analysis shall be performed as a part of the application review for each application subject to the BACT requirements pursuant to the District’s NSR Rule.

Pursuant to the attached Top-Down BACT Analysis (see Attachment III), BACT has been satisfied with the following:

VOC: The flare operates smokelessly limited to visible emissions less than 5% opacity except for a period or periods aggregating three minutes or less in any one hour.
B. Offsets

1. Offset Applicability

Pursuant to Section 4.5.3, offset requirements shall be triggered on a pollutant by pollutant basis and shall be required if the Post Project Stationary Source Potential to Emit (SSPE2) equals to or exceeds the offset threshold levels in Table 4-1 or Rule 2201.

The following table compares the post-project facility-wide annual emissions in order to determine if offsets will be required for this project.

<table>
<thead>
<tr>
<th></th>
<th>Offset Determination (lb/year)</th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>NOx</td>
<td>SOx</td>
<td>PM$_{10}$</td>
<td>CO</td>
<td>VOC</td>
</tr>
<tr>
<td>Post Project SSPE (SSPE2)</td>
<td>19,584</td>
<td>4,118</td>
<td>2,304</td>
<td>106,560</td>
<td>18,144</td>
</tr>
<tr>
<td>Offset Threshold</td>
<td>20,000</td>
<td>54,750</td>
<td>29,200</td>
<td>200,000</td>
<td>20,000</td>
</tr>
<tr>
<td>Offsets triggered?</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

2. Quantity of Offsets Required

As seen above, the SSPE2 is not greater than the offset thresholds for any the pollutant; therefore offset calculations are not necessary and offsets will not be required for this project.

C. Public Notification

1. Applicability

Pursuant to District Rule 2201, Section 5.4, public noticing is required for:

   a. New Major Sources, Federal Major Modifications, and SB 288 Major Modifications,
   b. Any new emissions unit with a Potential to Emit greater than 100 pounds during any one day for any one pollutant,
   c. Any project which results in the offset thresholds being surpassed,
   d. Any project with an SSPE of greater than 20,000 lb/year for any pollutant, and/or
   e. Any project which results in a Title V significant permit modification

   a. New Major Sources, Federal Major Modifications, and SB 288 Major Modifications

New Major Sources are new facilities, which are also Major Sources. As shown in Section VII.C.5 above, the SSPE2 is not greater than the Major Source threshold for any pollutant. Therefore, public noticing is not required for this project for new Major Source purposes.
As demonstrated in VII.C.7, this project does not constitute an SB 288 or Federal Major Modification; therefore, public noticing for SB 288 or Federal Major Modification purposes is not required.

b. PE > 100 lb/day

The PE2 for each new unit is compared to the daily PE Public Notice thresholds in the following table:

<table>
<thead>
<tr>
<th>Pollutant</th>
<th>PE2 (lb/day)</th>
<th>Public Notice Threshold</th>
<th>Public Notice Triggered?</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOx</td>
<td>204.0</td>
<td>100 lb/day</td>
<td>Yes</td>
</tr>
<tr>
<td>SOx</td>
<td>42.9</td>
<td>100 lb/day</td>
<td>No</td>
</tr>
<tr>
<td>PM10</td>
<td>24.0</td>
<td>100 lb/day</td>
<td>No</td>
</tr>
<tr>
<td>CO</td>
<td>1,110.0</td>
<td>100 lb/day</td>
<td>Yes</td>
</tr>
<tr>
<td>VOC</td>
<td>189.0</td>
<td>100 lb/day</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Therefore, public noticing for PE > 100 lb/day purposes is required.

c. Offset Threshold

The SSPE1 and SSPE2 are compared to the offset thresholds in the following table.

<table>
<thead>
<tr>
<th>Pollutant</th>
<th>SSPE1 (lb/year)</th>
<th>SSPE2 (lb/year)</th>
<th>Offset Threshold</th>
<th>Public Notice Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOx</td>
<td>0</td>
<td>19,584</td>
<td>20,000 lb/year</td>
<td>No</td>
</tr>
<tr>
<td>SOx</td>
<td>0</td>
<td>4,118</td>
<td>54,750 lb/year</td>
<td>No</td>
</tr>
<tr>
<td>PM10</td>
<td>0</td>
<td>2,304</td>
<td>29,200 lb/year</td>
<td>No</td>
</tr>
<tr>
<td>CO</td>
<td>0</td>
<td>106,560</td>
<td>200,000 lb/year</td>
<td>No</td>
</tr>
<tr>
<td>VOC</td>
<td>0</td>
<td>18,144</td>
<td>20,000 lb/year</td>
<td>No</td>
</tr>
</tbody>
</table>

As detailed above, there were no thresholds surpassed with this project; therefore public noticing is not required for offset purposes.

d. SSIME > 20,000 lb/year

Public notification is required for any permitting action that results in a Stationary Source Increase in Permitted Emissions (SSIME) of more than 20,000 lb/year of any affected pollutant. According to District policy, the SSIME is calculated as the Post Project Stationary Source Potential to Emit (SSPE2) minus the Pre-Project Stationary Source Potential to Emit (SSPE1), i.e. SSIME = SSPE2 – SSPE1. The values for SSPE2 and SSPE1 are calculated according to Rule 2201, Sections 4.9 and 4.10,
respectively. The SSIPE is compared to the SSIPE Public Notice thresholds in the following table:

<table>
<thead>
<tr>
<th>Pollutant</th>
<th>SSPE2 (lb/year)</th>
<th>SSPE1 (lb/year)</th>
<th>SSIPE (lb/year)</th>
<th>SSIPE Public Notice Threshold</th>
<th>Public Notice Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO&lt;sub&gt;x&lt;/sub&gt;</td>
<td>19,584</td>
<td>0</td>
<td>19,584</td>
<td>20,000 lb/year</td>
<td>No</td>
</tr>
<tr>

</tr>
</tbody>
</table>

As demonstrated above, the SSIPE for CO was greater than 20,000 lb/year; therefore public noticing for SSIPE purposes is required.

e. Title V Significant Permit Modification

As shown in the Discussion of Rule 2520 below, this project does not constitute a Title V Significant Modification. Therefore, public noticing for Title V significant modifications is required for this project.

2. Public Notice Action

As discussed above, public noticing is required for this project for daily emissions in excess of 100 lb/day and SSIPE greater than 20,000 lb/year. Therefore, public notice documents will be submitted to the California Air Resources Board (CARB) and a public notice will be published in a local newspaper of general circulation prior to the issuance of the ATCs for this equipment.

D. Daily Emission Limits (DELS)

Daily Emissions Limitations (DELS) and other enforceable conditions are required by Section 3.15 to restrict a unit’s maximum daily emissions, to a level at or below the emissions associated with the maximum design capacity. Per Sections 3.15.1 and 3.15.2, the DEL must be contained in the latest ATC and contained in or enforced by the latest PTO and enforceable, in a practicable manner, on a daily basis. DELs are also required to enforce the appliability of BACT.

Proposed Rule 2201 (DEL) Conditions:

Daily and annual amounts of gas flared shall not exceed 3.0 MMBtu/day nor 288 MMBtu in any rolling 12-month period. [District Rules 2201 and 4102]

Sulfur compound concentration of gas flared shall not exceed 5 gr/100 scf (85 ppmv). [District Rules 2201 and 4801]
Emission rates shall not exceed any of the following: 0.008 lb-PM10/MMBtu, 0.068 lb-NOx/MMBtu (as NO2), 0.063 lb-VOC/MMBtu, or 0.37 lb-CO/MMBtu. [District Rules 2201 and 4201]

NOx emissions shall not exceed 19,584 pounds in any rolling 12-month period. VOC emissions shall not exceed 18,144 pounds in any rolling 12-month period [District Rule 2201]

On a monthly basis, the permittee shall calculate and record the monthly NOx and VOC emissions from this unit. [District Rule 2201]

E. Compliance Assurance

1. Source Testing

The following testing condition is included on the proposed ATC:

Permittee shall document compliance with well gas sulfur compound concentration limit by performing sulfur content analysis of well gas upon startup at each new location of operation of flare. [District Rule 2201] N

2. Monitoring

The following monitoring condition is included:

Permittee shall inspect the flare in operation for visible emissions no less frequently than once every two weeks. If visible emissions are observed, corrective action shall be taken. If visible emissions persist, an EPA Method 9 test shall be performed within 72 hours. [District Rule 2201] N

3. Recordkeeping

Recordkeeping is required to demonstrate compliance with the offset, public notification and daily emission limit requirements of Rule 2201. The following condition(s) will appear on the permit to operate:

Permittee shall maintain accurate daily records indicating flare location, flared gas sulfur content at each location, and daily and annual rates of gas flared; and such records shall be made readily available for District inspection upon request for a minimum of 5 years. [District Rule 2201] N

4. Reporting

The facility is required to report the location at which the flare is operating. The following condition will be placed on the permit to show compliance with this section.

Permittee shall notify the District Compliance Division of each location at which the operation is located in excess of 24 hours. Such notification shall be made no later than 48 hours after starting operation at the location. [District Rule 2201]
F. Ambient Air Quality Analysis (AAQA)

Section 4.14 of this Rule requires that an ambient air quality analysis (AAQA) be conducted for the purpose of determining whether a new or modified Stationary Source will cause or make worse a violation of an air quality standard. Technical Services Division performed modeling for criteria pollutants CO, NOx, SOx and PM10. The results from the Criteria Modeling are as follows:

The results from the Criteria Pollutant Modeling are as follows:

<table>
<thead>
<tr>
<th>Criteria Pollutant Modeling Results*</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOx</td>
</tr>
<tr>
<td>SOx</td>
</tr>
<tr>
<td>PM10</td>
</tr>
<tr>
<td>PM2.5</td>
</tr>
</tbody>
</table>

*Results were taken from the attached PSD spreadsheet.
¹The project was compared to the 1-hour NO2 National Ambient Air Quality Standard that became effective on April 12, 2010 using the District’s approved procedures.
²The criteria pollutants are below EPA’s level of significance as found in 40 CFR Part 51.165 (b)(2).
³The court has vacated EPA’s PM2.5 SILs. Until such time as new SIL values are approved, the District will use the corresponding PM10 SILs for both PM10 and PM2.5 analyses.

As shown by the AAQA summary sheet the proposed equipment will not cause a violation of an air quality standard for NOx, CO, PM10, or SOx. Refer to Attachment IV of this document for the full AAQA report from Technical Services.

Rule 2410 Prevention of Significant Deterioration

As shown in Section VII.C.9 above, this project does not result in a new PSD major source or PSD major modification. No further discussion is required.

Rule 2520 Federally Mandated Operating Permits

Since this facility’s potential emissions do not exceed any major source thresholds of Rule 2201, this facility is not a major source, and Rule 2520 does not apply.

Rule 4001 New Source Performance Standards (NSPS)

This rule incorporates NSPS from Part 60, Chapter 1, Title 40, Code of Federal Regulations (CFR); and applies to all new sources of air pollution and modifications of existing sources of air pollution listed in 40 CFR Part 60. However, no subparts of 40 CFR Part 60 apply to well test flares.
Rule 4002 National Emission Standards for Hazardous Air Pollutants (NESHAPs)

This rule incorporates NESHAPs from Part 61, Chapter I, Subchapter C, Title 40, CFR and the NESHAPs from Part 63, Chapter I, Subchapter C, Title 40, CFR; and applies to all sources of hazardous air pollution listed in 40 CFR Part 61 or 40 CFR Part 63. However, no subparts of 40 CFR Part 61 or 40 CFR Part 63 apply to well test flares.

Rule 4101 Visible Emissions

Rule 4101 requires that no person shall discharge into the atmosphere emissions of any air contaminant aggregating more than 3 minutes in any hour which is as dark as or darker than Ringelmann 1 (or 20% opacity). Per FYI 83, when BACT is required for PM$_{10}$ the visible emissions will be limited to less than Ringelmann ¼ and less than 5% opacity. As long as the flaring system (with air assist) is operating correctly, compliance with this rule is expected.

Rule 4102 Nuisance

Rule 4102 prohibits discharge of air contaminants which could cause injury, detriment, nuisance or annoyance to the public. Public nuisance conditions are not expected as a result of these operations, provided the equipment is well maintained. Therefore, compliance with this rule is expected.

California Health & Safety Code 41700 (Health Risk Assessment)

District Policy APR 1905 – Risk Management Policy for Permitting New and Modified Sources specifies that for an increase in emissions associated with a proposed new source or modification, the District perform an analysis to determine the possible impact to the nearest resident or worksite.

An HRA is not required for a project with a total facility prioritization score of less than one. According to the Technical Services Memo for this project (Attachment IV), the total facility prioritization score including this project was greater than one. Therefore, an HRA was required to determine the short-term acute and long-term chronic exposure from this project.

The cancer risk for this project is shown below:

<table>
<thead>
<tr>
<th>HRA Summary</th>
<th>Cancer Risk</th>
<th>T-BACT Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit</td>
<td>Cancer Risk</td>
<td>T-BACT Required</td>
</tr>
<tr>
<td>S-7045-21, '22</td>
<td>0.38 E-06 (each)</td>
<td>No</td>
</tr>
</tbody>
</table>

Discussion of T-BACT

BACT for toxic emission control (T-BACT) is required if the cancer risk exceeds one in one million. As demonstrated above, T-BACT is not required for this project because the HRA indicates that the risk is above the District’s thresholds for triggering T-BACT requirements.
To ensure that human health risks will not exceed District allowable levels; the following permit conditions must be included for:

**Unit # 21-0 and '22-0**

4. The exhaust stack shall vent vertically upward. The vertical exhaust flow shall not be impeded by a rain cap (flapper ok), roof overhang, or any other obstruction. [District Rule 4102] N

5. The units cannot operate within 1500 feet of any receptor (residential or offsite work site). [District Rule 4102] N

6. Flare shall not be operated at any location in conjunction with any other flare or combustion equipment operated by PROs Inc. [District Rule 2201] N

The results of the HRA is included in Attachment IV.

**Rule 4201 Particulate Matter Concentration**

Section 3.1 prohibits discharge of dust, fumes, or total particulate matter into the atmosphere from any single source operation in excess of 0.1 grain per dry standard cubic foot. For natural gas the EPA F-factor (adjusted to 60°F) is 8710 dscf/MMBtu (40 CFR 60 Appendix B).

\[
\text{PM}_{10} \text{ Emission Factor: } 0.008 \text{ lb-PM}_{10}/\text{MMBtu}
\]

Percentage of PM as PM$_{10}$ in Exhaust: 100%

Exhaust Oxygen (O$_2$) Concentration: 3%

Excess Air Correction to F Factor = \[
\frac{20.9}{(20.9 - 3)} = 1.17
\]

\[
GL = \left( \frac{0.008 \text{ lb-PM}}{\text{MMBtu}} \times \frac{7,000 \text{ grain}}{\text{lb-PM}} \right) / \left( \frac{8,710 \text{ ft}^3}{\text{MMBtu}} \times 1.17 \right)
\]

\[
GL = 0.0055 \frac{\text{grain/dscf}}{0.1 \frac{\text{grain/dscf}}{}}
\]

**Rule 4311 Flares**

This rule limits VOC and NOx emissions from flares. The flare is a separate stationary source which has a potential to emit less than 10 tons/yr NOx and 10 tons/yr VOCs. Therefore, the facility is exempt from all requirements of the rule except the record-keeping requirements of Section 6.2.4. Section 6.2.4 states that "beginning January 1, 2007 facilities claiming an exemption pursuant to Section 4.3 shall record annual throughput, material usage, or other information necessary to demonstrate an exemption under that section." Facility will keep records of annual volumes of gas combusted in the flares to ensure that NOx and VOC emissions remain below 10 tons/yr. Therefore, compliance is expected.
Rule 4801 Sulfur Compounds

Rule 4801 requires that a person shall not discharge into the atmosphere sulfur compounds, which would exist as a liquid or gas at standard conditions, exceeding in concentration at the point of discharge: two-tenths (0.2) percent by volume calculated as sulfur dioxide (SO2), on a dry basis averaged over 15 consecutive minutes.

Emission calculations were calculated using a fuel with a 5 gr/100 dscf sulfur content. Therefore, the maximum SOx ppmv are calculated to be:

\[
SO_x = (5\ \text{gr/100 dscf fuel}) \times (1\ \text{lb/7000 gr S}) \times (1\ \text{mol/32 lb S}) \times (379.5\ \text{dscf S/1 mol S}) \times (1\ \text{dscf fuel/1000 Btu}) \times (1 \times 10^6\ \text{Btu/8710 dscf}) \times (1 \times 10^6) \\
= 9.7\ \text{ppmv} < 2,000\ \text{ppmv}
\]

California Health & Safety Code 42301.6 (School Notice)

The District has verified that this site is not located within 1,000 feet of a school. Therefore, pursuant to California Health and Safety Code 42301.6, a school notice is not required.

California Environmental Quality Act (CEQA)

CEQA requires each public agency to adopt objectives, criteria, and specific procedures consistent with CEQA Statutes and the CEQA Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. The District adopted its Environmental Review Guidelines (ERG) in 2001. The basic purposes of CEQA are to:

- Inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities;
- Identify the ways that environmental damage can be avoided or significantly reduced;
- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible; and
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

Greenhouse Gas (GHG) Significance Determination

Oil and gas operations in Kern County must comply with the Kern County Zoning Ordinance – 2015 (C) Focused on Oil and Gas Local Permitting. In 2015, Kern County revised the Kern County Zoning Ordinance Focused on Oil and Gas Activities (Kern Oil and Gas Zoning Ordinance) in regards to future oil and gas exploration, and drilling and production of hydrocarbon resource projects occurring within Kern County.

Kern County served as lead agency for the revision to their ordinance under the California Environmental Quality Act (CEQA), and prepared an Environmental Impact Report (EIR)
that was certified on November 9, 2015. The EIR evaluated and disclosed to the public the environmental impacts associated with the growth of oil and gas exploration in Kern County, and determined that such growth will result in significant GHG impacts in the San Joaquin Valley. As such, the EIR included mitigation measures for GHG.

The District is a Responsible Agency for the project because of its discretionary approval power over the project via its Permits Rule (Rule 2010) and New Source Review Rule (Rule 2201), (CEQA Guidelines §15381). As a Responsible Agency, the District is limited to mitigating or avoiding impacts for which it has statutory authority. The District does not have statutory authority for regulating GHGs. The District has determined that the applicant is responsible for implementing GHG mitigation measures imposed in the EIR by the Kern County for the Kern County Zoning Ordinance.

**District CEQA Findings**

The proposed project is located in Kern County and is thus subject to the Kern County Zoning Ordinance – 2015 (C) Focused on Oil and Gas Local Permitting. The Kern County Zoning Ordinance was developed by the Kern County Planning Agency as a comprehensive set of goals, objectives, policies, and standards to guide development, expansion, and operation of oil and gas exploration within Kern County.

In 2015, Kern County revised their Kern County Zoning Ordinance in regards to exploration, drilling and production of hydrocarbon resources projects. Kern County, as the lead agency, is the agency that will enforce the mitigation measures identified the EIR, including the mitigation requirements of the Oil and Gas ERA. As a responsible agency the District complies with CEQA by considering the EIR prepared by the Lead Agency, and by reaching its own conclusion on whether and how to approve the project involved (CCR §15096). The District has reviewed the EIR prepared by Kern County, the Lead Agency for the project, and finds it to be adequate. The District also prepared a full findings document. The full findings document, *California Environmental Quality Act (CEQA) Statement of Findings for the Kern County Zoning Ordinance* EIR contains the details of the District's findings regarding the Project. The District's implementation of the Kern Zoning Ordinance and its EIR applies to ATC applications received for any new/modified equipment used in oil/gas production in Kern County, including new wells. The full findings applies to the Project and the Project's related activity equipment(s) is covered under the Kern Zoning Ordinance. To reduce project related impacts on air quality, the District evaluates emission controls for the project such as Best Available Control Technology (BACT) under District Rule 2201 (New and Modified Stationary Source Review). In addition, the District is requiring the applicant to surrender emission reduction credits (ERC) for stationary source emissions above the offset threshold.

Thus, the District concludes that through a combination of project design elements, permit conditions, and the Oil and Gas ERA, the project will be fully mitigated to result in no net increase in emissions. Pursuant to CCR §15096, prior to project approval and issuance of ATCs the District prepared findings.
Indemnification Agreement/Letter of Credit Determination

According to District Policy APR 2010 (CEQA Implementation Policy), when the District is the Lead or Responsible Agency for CEQA purposes, an indemnification agreement and/or a letter of credit may be required. The decision to require an indemnity agreement and/or a letter of credit is based on a case-by-case analysis of a particular project’s potential for litigation risk, which in turn may be based on a project’s potential to generate public concern, its potential for significant impacts, and the project proponent’s ability to pay for the costs of litigation without a letter of credit, among other factors.

The revision to the Kern County Zoning Ordinance went through an extensive public process that included a Notice of Preparation, a preparation of an EIR, scoping meetings, and public hearings. The process led to the certification of the final EIR and approval of the revised Kern County Zoning Ordinance in November 2015 by the Kern County Board of Supervisors. As mentioned above, the proposed project will be fully mitigated and will result in no net increase in emissions. In addition, the proposed project is not located at a facility of concern; therefore, an Indemnification Agreement and/or a Letter of Credit will not be required for this project in the absence of expressed public concern.

IX. Recommendation

Compliance with all applicable rules and regulations is expected. Pending a successful NSR Public Noticing period, issue Authorities to Construct S-7045-21-0 and ‘-22-0 subject to the permit conditions on the attached draft Authority to Construct in Attachment V.

X. Billing Information

The fee schedule is based on the proposed throughput of the flare.

ATTACHMENT III

BACT Analysis

All current BACT guidelines for flares have been rescinded. Therefore, a project specific BACT analysis will be performed for this project.

1. BACT Analyses for VOCs:

   a. Step 1 - Identify all control technologies

   An open flare with smokeless combustion and visible emissions less than 5% opacity, except for a period or periods aggregating three minutes or less in any one hour (99% control efficiency)

   Enclosed low NOx flares capable of achieving 99% control of VOC emissions and NOx emissions of 15 ppmv @ 3% O2 (99% control efficiency and NOx emissions ≤ 15 ppmv @ 3% O2).

   b. Step 2 - Eliminate technologically infeasible options

   Enclosed low NOx flares capable of achieving 99% control of VOC emissions and NOx emissions of 15 ppmv @ 3% O2 are not technically feasible to control well drilling and testing operations due to:
   1) The highly variable nature of gas degenerated from a well drilling and testing operation are not suitable to combustion in an enclosed low NOx flare, as such flares require a steady flow of gas to operate properly, and
   2) Low NOx flares are not inherently portable, as the equipment requires a large foundation, and equipment for control the air flow into the flare, temperature controls, etc.,

   c. Step 3 - Rank remaining options by control effectiveness

   Smokeless combustion with visible emissions less than 5% opacity, except for a period or periods aggregating three minutes or less in any one hour (99% control efficiency)

   d. Step 4 - Cost effectiveness analysis

   Because the applicant is proposing the one listed control technology listed Step 3 above, a cost effectiveness analysis is not required.

   e. Step 5 - Select BACT

   An open flare with smokeless combustion and visible emissions less than 5% opacity, except for a period or periods aggregating three minutes or less in any one hour (99% control efficiency).

   BACT is satisfied.

*Each flare is considered its own facility therefore; the risks will not be summed. No two flares will operate at the same time in the same location.

Proposed Permit Requirements

To ensure that human health risks will not exceed District allowable levels; the following shall be included as requirements for:

**Unit # 21-0 & 22-0**

1. The exhaust stack shall vent vertically upward. The vertical exhaust flow shall not be impeded by a rain cap (flapper ok), roof overhang, or any other obstruction.
2. The units cannot operate within 1500 feet of any receptor (residential or offsite work site).
3. Flare shall not be operated at any location in conjunction with any other flare or combustion equipment operated by PROs Inc. [District Rule 2201] N

B. RMR REPORT

I. Project Description

Technical Services received a request on August 06, 2018, to perform an Ambient Air Quality Analysis and a Risk Management Review for two transportable 125 MMBTU Flares used for well testing and drilling operations, equipment depressurization and pipeline pigging operated at various unspecified locations, SJVAPCD.
II. Analysis

Toxic emissions for this proposed unit were calculated using 2001 Ventura County's Air Pollution Control District's emission factors for Natural Gas Fired external combustion and from a refinery gas composition analysis from the 2005 report FINAL REPORT Test of TDA's Direct Oxidation Process for Sulfur Recovery, and input into the San Joaquin Valley APCD's Hazard Assessment and Reporting Program (SHARP). In accordance with the District's Risk Management Policy for Permitting New and Modified Sources (APR 1905, May 28, 2015), risks from the proposed unit's toxic emissions were prioritized using the procedure in the 2016 CAPCOA Facility Prioritization Guidelines. The prioritization score for this proposed facility was greater than 1.0 (see RMR Summary Table). Therefore, a refined health risk assessment was required. The AERMOD model was used, with the parameters outlined below and meteorological data for 2010-2014 from Hanford to determine the dispersion factors (i.e., the predicted concentration or X divided by the normalized source strength or Q) for a receptor grid. These dispersion factors were input into the SHARP Program, which then used the Air Dispersion Modeling and Risk Tool (ADMRT) of the Hot Spots Analysis and Reporting Program Version 2 (HARP 2) to calculate the chronic and acute hazard indices and the carcinogenic risk for the project.

The following parameters were used for the review:

<table>
<thead>
<tr>
<th>Source Type</th>
<th>Point</th>
<th>Location Type</th>
<th>Rural</th>

The results from the Criteria Pollutant Modeling are as follows:
AUTHORITY TO CONSTRUCT

PERMIT NO: S-7045-22-0
LEGAL OWNER OR OPERATOR: PROS INC
MAILING ADDRESS: PO BOX 20996
BAKERSFIELD, CA 93390-0996
LOCATION: VARIOUS LOCATIONS, SJVUAPCD

EQUIPMENT DESCRIPTION:
TRANSPORTABLE 125 MMBTU/HR FLARE WITH GAS SCRUBBER AND 3- PHASE SEPARATOR AND OPTIONAL AIR-
ASSIST FOR MULTIPLE USES INCLUDING WELL TESTING AND DRILLING OPERATIONS, EQUIPMENT
DEPRESSURIZATION, AND PIPELINE PIGGING OPERATED AT VARIOUS UNSPECIFIED LOCATIONS, SJVAPCD

CONDITIONS

1. The equipment shall not be located within 1000 ft. of any K-12 school. [CH&SC 42301.6]
2. {98} No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
3. Permittee shall notify the District Compliance Division of each location at which the operation is located in excess of 24 hours. Such notification shall be made no later than 48 hours after starting operation at the location. [District Rule 2201]
4. The exhaust stack shall vent vertically upward. The vertical exhaust flow shall not be impeded by a rain cap (flapper ok), roof overhang, or any other obstruction. [District Rule 4102]
5. The unit shall not operate within 1500 feet of any receptor (residential or offsite work site). [District Rule 4102]
6. Flare shall not be operated at any location in conjunction with any other flare or combustion equipment operated by PROs Inc. [District Rule 2201]
7. This permit shall not authorize the utilization of any IC engine, or other combustion device requiring a separate permit, for powering the air assist to the flare. [District Rule 2201]
8. The unit shall not be located and operated at an existing facility or operation such that it becomes part of an existing stationary source as defined by District Rule 2201. [District Rule 2201]
9. Flare shall be equipped with air assist which shall be utilized when needed to maintain visible emissions below Ringlemann 1/4 and 5% opacity for any 3 minute interval in an hour. [District Rules 2201 and 4101]

CONDITIONS CONTINUE ON NEXT PAGE

YOU MUST NOTIFY THE DISTRICT COMPLIANCE DIVISION AT (661) 392-5500 WHEN CONSTRUCTION IS COMPLETED AND PRIOR TO OPERATING THE EQUIPMENT OR MODIFICATIONS AUTHORIZED BY THIS AUTHORITY TO CONSTRUCT. This is NOT a PERMIT TO OPERATE. Approval or denial of a PERMIT TO OPERATE will be made after an inspection to verify that the equipment has been constructed in accordance with the approved plans, specifications and conditions of this Authority to Construct, and to determine if the equipment can be operated in compliance with all Rules and Regulations of the San Joaquin Valley Unified Air Pollution Control District. Unless construction has commenced pursuant to Rule 2050, this Authority to Construct shall expire and application shall be cancelled two years from the date of issuance. The applicant is responsible for complying with all laws, ordinances and regulations of all other governmental agencies which may pertain to the above equipment.

Samir Sheikh, Executive Director, Apco
10. Flare shall be equipped with operational automatic re-ignition provisions. [District Rule 2201]

11. Gas line to flare shall be equipped with operational, volumetric flow rate indicator. [District Rule 2201]

12. Daily and annual amounts of gas flared shall not exceed 3.0 MMBtu/day nor 288 MMBtu in any rolling 12-month period. [District Rules 2201 and 4102]

13. Sulfur compound concentration of gas flared shall not exceed 5 gr/100 scf (85 ppmv). [District Rules 2201 and 4801]

14. Emission rates shall not exceed any of the following: 0.008 lb-PM10/MMBtu, 0.068 lb-NOx/MMBtu (as NO2), 0.063 lb-VOC/MMBtu, or 0.37 lb-CO/MMBtu. [District Rules 2201 and 4201]

15. NOx emissions shall not exceed 19,584 pounds in any rolling 12-month period. VOC emissions shall not exceed 18,144 pounds in any rolling 12-month period [District Rule 2201]

16. On a monthly basis, the permittee shall calculate and record the monthly NOx and VOC emissions from this unit. [District Rule 2201]

17. On a monthly basis, the permittee shall calculate and record the monthly NOx and VOC emissions in pounds for the rolling 12-month period. [District Rule 2201]

18. The flare shall be operated according to the manufacturer's specifications, a copy of which shall be maintained on site. [District Rule 2201]

19. Permittee shall inspect the flare in operation for visible emissions no less frequently than once every two weeks. If visible emissions are observed, corrective action shall be taken. If visible emissions persist, an EPA Method 9 test shall be performed within 72 hours. [District Rule 2201]

20. Permittee shall document compliance with well gas sulfur compound concentration limit by performing sulfur content analysis of well gas upon startup at each new location of operation of flare. [District Rule 2201]

21. The following test methods shall be used for well gas sulfur content: ASTM D3246 or double GC for H2S and mercaptan. [District Rule 1081]

22. Permittee shall maintain accurate daily records indicating flare location, flared gas sulfur content at each location, and daily and annual rates of gas flared; and such records shall be made readily available for District inspection upon request for a minimum of 5 years. [District Rules 2201 and 4311]
