Summary of Action Items for
Stakeholder Meeting On Permit Streamlining

From Meeting Held on June 30, 2010
10:00 am

Action Items Summary

Item	Action	Status
1	Stakeholders ask that the District enhance the ability to track changes to permit conditions made through permitting actions. Based on suggestions from stakeholders, the District has created a programming task to enhance our permit administration system (PAS) with this functionality. The District set up a subcommittee (with District programmers) to explore solutions to help facilities track changes to permit conditions. One suggestion is to separate any new/changed conditions by adding to the end of the permit to aid in identifying the changes from the previous Title V permit reporting requirements. In the meantime, a beta permit tracking access program has been developed and shared with interested stakeholders. The District seeks feedback on this tracking program. (Marjollet)	On hold until this item obtains District programming resources
2	Manual Cunha suggestion that a Compliance Assistance Bulletin on the ARB truck idling rule be sent to truck manufacturers, farm bureaus, Fresno Business Journal and truck repair shops. (Lambert)	Place on future agenda for update
3	D. Champion suggested that the project number be added to ATC and PTO. (Swaney)	Swaney to follow up to further define action.
4	For draft policies or other draft documents look into creating a page on district website that allows stakeholders to enter instant comments (Garcia)	District continues to accept written comments on policies and documents and will not pursue this item at this time.
5	Request to post prior historical BACT guidelines for public to see what AIP was over past five years. (Garcia)	Working on website interface. Also will allow for easier search functions of BACT guidelines
