

# CONTROL TECHNOLOGY FOR COMMERCIAL CHARBROILING

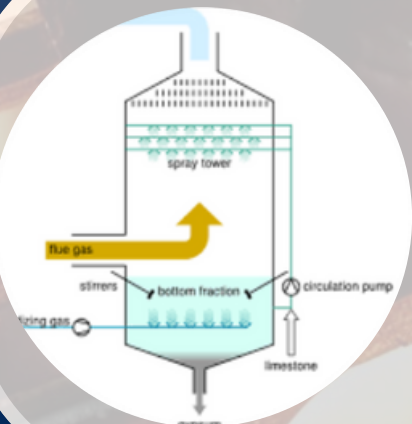

## ***Electrostatic Precipitator***

Applies high-voltage electrostatic charges to pollution and then uses oppositely charged plates to collect the pollution. Plates require regular cleaning.

## ***Filtration Units***

Media filters or other filter types, use filter materials to trap pollution. Filters are periodically cleaned and/or replaced.

## ***Scrubbers***

Fluid is sprayed into the exhaust stream where it fastens to or alters the pollution and can then be filtered out of the exhaust.
