Project Description: Occidental is proposing to construct and operate a new cryogenic natural gas processing plant to be located at the existing Occidental gas plant, (Stationary Source S-2234). The new plant, which was previously discussed in the 1995 Biological Opinion conducted at Elk Hills, will be designed to process approximately 200 MMscfd of natural gas from crude oil and natural gas production operations. Cryogenic processes involving compression and refrigeration are designed to separate ethane, propane, butane and natural gasoline from the produced gas stream. The remaining residue gas, containing primarily methane will be used as fuel or sold to offsite users. The facility will be constructed on an existing and fully disturbed industrial site currently occupied by a warehouse and pipe storage yard and will encompass an estimated 16.71 acres. Construction is expected to occur for an approximately 14 months. All work will be conducted in adherence to the 1995 Biological Opinion and Memorandum of Understanding (MOU) with the California Department of Fish & Game. These documents outline all necessary requirements for protecting listed species and their habitat.
