## **Gusty winds continue, prompt additional caution**

*Blowing dust in Madera, Fresno, Kings, Tulare  
and the Valley part of Kern County*

Gusty winds over the San Joaquin Valley have prompted local air-pollution officials to issue a second health cautionary statement through this evening. This statement follows one which expired yesterday at midnight.

Winds in **Madera, Fresno, Kings, Tulare and the Valley air basin portion of Kern counties** may produce areas of localized blowing dust. Blowing dust can result in unhealthy concentrations of particulate matter 10 microns and smaller, or PM10.

Exposure to particle pollution can cause serious health problems, aggravate lung disease, trigger asthma attacks and acute bronchitis, and increase risk of respiratory infections. For people with heart disease, short-term exposure to particle pollution has been linked to heart attacks and arrhythmia, according to the U.S. Environmental Protection Agency.

Residents in these areas are advised to use caution through this evening. People with heart or lung diseases should follow their doctors' advice for dealing with episodes of unhealthy air quality. Additionally, older adults and children should avoid prolonged exposure, strenuous activities or heavy exertion. Everyone else should reduce prolonged exposure, strenuous activities or heavy exertion.

For more information about the Valley Air District, call a regional office: in Fresno, 559-230-6000; in Bakersfield, 661-392-5500; and in Modesto, 209-557-6400.
